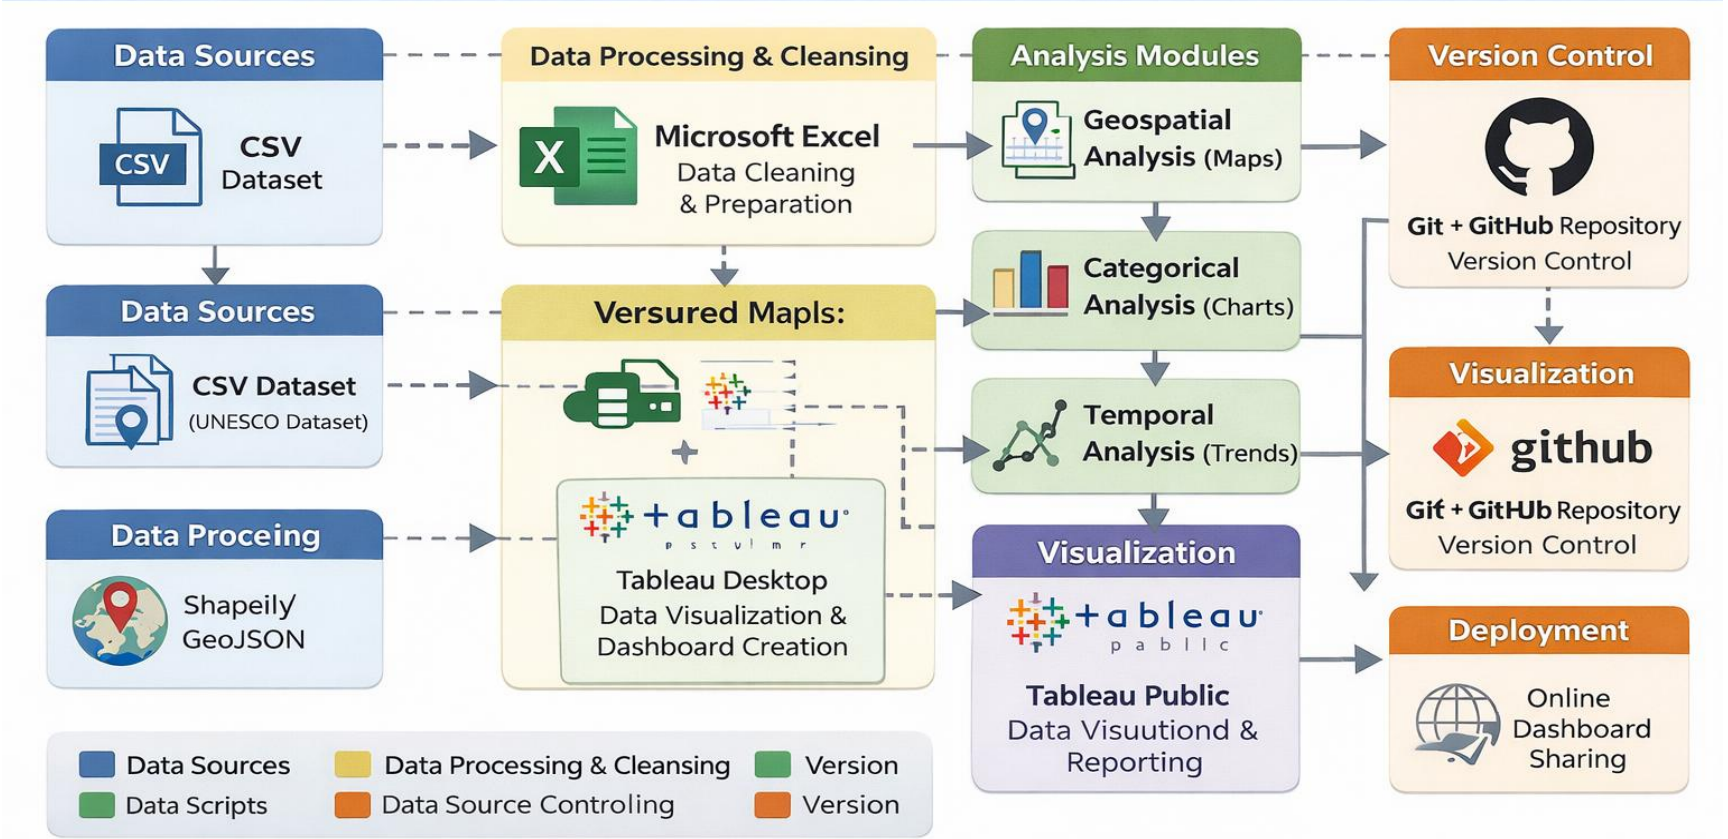
Project Design Phase-II
Technology Stack (Architecture & Stack)

Date	31 January 3035
Team ID	LTVIP2026TMIDS34739
Project Name	Heritage Treasures: An In-Depth Analysis of UNESCO World Heritage Sites using Tableau
Maximum Marks	4 Marks

Technical Architecture:

The Deliverable shall include the architectural diagram as below and the information as per the table1 & table 2

Technology Stack for "Heritage Treasures":
UNESCO World Heritage Sites Analysis using Tableau



Technology Stack for "Heritage Treasures"

Table-1 : Components & Technologies:

S.No	Component	Description	Technology
1.	User Interface	Displays interactive UNESCO heritage dashboards	Tableau Public
2.	Data Processing Logic	Data cleaning & filtering and formatting in tableau	Tableau Desktop
3.	Data Storage	Stores UNESCO heritage datasets	CSV files, Excel Sheets
4.	Visualization Layer	Creates interactive visual dashboards and charts maps	Tableau Public / Tableau Desktop
5.	Infrastructure (Server / Hosting)	Publishes and hosts dashboards Online	Tableau Public

Table-2: Application Characteristics:

S.No	Characteristics	Description	Technology
1.	Open-Source Frameworks	Uses open-source Python libraries for data processing	Python (Pandas, NumPy)
0.	Security	Secure storage and access to Tableau dashboards with controlled sharing	Tableau permissions, secure hosting
0.	Scalable Architecture	Justify the scalability of architecture (3 – tier, Micro-services)	Technology used
0.	Availability	Dashboards accessible anytime via Tableau Public or Cloud link	Tableau Public, Render, Railway
0.	Performance	Dashboards use Tableau Extracts for faster load; small datasets for demo	Tableau Data Extracts, Python ETL
