project Title: Heritage Treasures: An In-Depth Analysis of UNESCO World Heritage Sites using Tableau

purpose:

To solve the challenge of understanding the global distribution, categories, and trends of UNESCO World Heritage Sites by providing clear, interactive Tableau dashboards that deliver meaningful insights for cultural awareness and tourism analysis.

How it fits:

- Identifies real problem: large heritage data is difficult to understand in raw format.
- Uses existing data: UNESCO dataset is publicly available but lacks clear visualization.
- Fits user needs: simple and interactive dashboard with no technical complexity.
- Leverages trusted tools: web-based Tableau dashboards for easy access.
- Helps stakeholders: supports tourism analysis, research, and cultural awareness.
- Provides centralized visualization of UNESCO world heritage data in one platform
- Enables region-wise and country-wise comparision of heritage sites
- Helps students and researchers quickly identify trends across years
- Interactive dashboards for better understanding
- Saves time compared to manual analysis

Problem-Solution Fit Canvas 2.0

Identify strong PM & MM

Problem 01: Awareness & Accessibility

Problem
What is the issue?

- Lack of awareness about UNESCO World Heritage Sites.
- Limited access to comprehensive, updated data.
- Difficulty engaging students and researchers with heritage data.

01

Proposed Solution

- Create an interactive, easy-to-use dashboard using Tableau.
- Transform complex UNESCO CSV data into visual insights.
- Enhance accessibility with intuitive graphs & filters.

01

Proposed Solution

- Create an interactive, easy-to-use dashboard using Tableau.
- Transform complex UNESCO CSV data into visual insights.
- Enhance accessibility with intuitive graphs & filters.

Potential Benefits

Focus on AP. Tap into HC

Problem 02: Data Complexity

Where is the complexity?

- UNESCO heritage data is vast and complex.
- Manual sorting and analysis is time-consuming.
- Challenges comparing regions, site types, (Cultural/Natural/ Mixed).

02

Proposed Solution

- Utilize Tableau's capabilities for automated data sorting and visualization.
- Create various charts (maps, bar, pie) to categorize sites by density.
- Provide comparative analysis features for regional heritage density.

02

Proposed Solution

- Saves researchers time with automated sorting of complex data.
- Allows easy comparison of heritage data across continents and categories.
- Identifies top-ranking and underrepresented heritage region.

Proposed Benefits

Define CQ, Fit into CC

Problem 03: Monitoring & Awareness

What needs better tracking?

- Lack of real-time monitoring for endangered / danger sites.
- Limited engagement about preservation status.
- Difficulty identifying trends in site inscriptions over time.

03

Proposed Solution

- Utilize Tableau's capabilities for automated sorting of complex data.
- Allows easy comparison of heritage data across continents and categories.
- Identifies top-ranking and underrepresented heritage regions.

03

Proposed Solution

- Raises awareness for endangered heritage sites needing urgent action.
- Tracks progress and trends in global heritage site inscription.
- Provides a public platform for ongoing awareness and education.

Potential Benefits
